Chief complaint: Dizziness for 1 week.

Present medical history: The patient experienced dizziness, nausea, and vomiting without any obvious cause one week ago. The patient felt muscle soreness in both upper and lower limbs, accompanied by blurred vision in both eyes and excessive sweating. Blood pressure was measured at 94/62mmHg on the boat, and the symptoms lasted for about 1 minute before relieving. The patient's mental state is still good, there is no chest tightness or shortness of breath, their diet and sleep are still good, there are no convulsions, and their bowel movements are normal.

Medical history: 3 years of hypertension, self medication for lowering blood pressure.

Physical examination: BP: 129/99mmHg, clear mind, equal sized and round pupils on both sides, diameter 2.5mm, sensitive to light reflex, angle of mouth not deviated, clear breathing sounds in both lungs, no dry or wet rales heard, heart rate 78 beats per minute, regular rhythm, soft abdomen, no tenderness, rebound pain or muscle tension, and no edema in both lower limbs. Limb muscle strength level 5, normal muscle tone, negative double Babbitt sign.

Auxiliary examination: ECG: HR78bpm, sinus rhythm. Brain CT: No significant abnormalities were observed.

Preliminary diagnosis: 1. Dizziness to be investigated
2. Hypertension

Disposal: 1. Administer one tablet of Betahistine three times a day, and pay attention to rest;
2. Monitor blood pressure: maintain blood pressure at 130-140/80-90mmHg: 3Pay attention to replenishing water. If there are no contraindications, it is recommended to drink 1000ml-2000ml of water within 24 hours; 4. Follow up.
